## Oral Test

1. How do we calculate the mode of a grouped data?

---

---

---

---

2. How do we calculate the mean of a grouped data by the assumed mean method?

---

---

---

---

3. Which measure of central tendency should be avoided if the extreme values affect the data?

---

---

---

---

4. Is the mean of the ungrouped data always same as the mean calculated when the same data is grouped? Give reasons.

---

---

---

---

5. How will you define the 'median' of a data?

---

---

---

---
